Report Overview

An Uninterrupted Power System (UPS) is a backup power supply device designed to provide continuous, stable, and uninterrupted power to critical equipment, such as computers, servers, and other sensitive electronic devices, in the event of a power outage or voltage fluctuations. It consists of a battery, an inverter, and a rectifier, which work together to maintain a constant power supply. When the main power source fails, the UPS switches to battery power, allowing the connected devices to continue operating without interruption. The UPS also serves as a voltage stabilizer, filtering out power surges, sags, and noise that can damage sensitive electronics. The primary purpose of a UPS is to protect equipment from power-related issues, ensuring data integrity and minimizing downtime in case of power disruptions.
