Abstracts

An uninterruptible backup power supply is a machine that provides emergency power backup to anything that's plugged into it in the event of a mains power failure, including computer equipment, kitchen appliances, and even all-important medical equipment. Although a uninterrupted battery backup operates in a similar manner to a generator, and both systems are designed to provide backup power, with uninterrupted battery backup models there is no gap in the power supply and it is designed to provide a backup power supply so that you can safely shut down your electrical devices avoiding damage. A generator may have a brief interruption of power before kicking in and, thereafter, providing hours of power, whereas a standby uninterruptible power source is mainly for protecting your equipment against power outages and power surges, saving you from potential damage. Since standby power supply work on batteries, their hours of usage are limited, but they are a necessity, especially in areas prone to power cuts.

The global Uninterruptible Backup Power Supply market size was estimated at USD 12125.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
