### Report Overview

Unmanned Airborne Radar (UAR) is a sophisticated surveillance and reconnaissance technology that utilizes unmanned aerial vehicles (UAVs) or drones equipped with advanced radar systems. These systems are designed to provide real-time, high-resolution imagery and data collection capabilities over large areas, particularly in situations where manned aircraft may be at risk or impractical. The UAR is capable of operating in various weather conditions and can be deployed for extended periods, offering persistent monitoring and surveillance. It is commonly used in military applications for intelligence, surveillance, and reconnaissance (ISR) missions, as well as in civilian applications such as disaster management, border control, and environmental monitoring. The radar systems on UARs are often multifunctional, capable of detecting and tracking ground and air targets, providing early warning, and supporting navigation and mapping tasks.
