Report Overview

Unshielded Multi-core Cable is a type of electrical cable designed for various applications, particularly in industrial, commercial, and residential settings. It is characterized by its multiple insulated copper or aluminum conductors bundled together, which allows for efficient power distribution and transmission. The absence of a shielding layer, such as a braided shield or foil, makes it more cost-effective and easier to install compared to shielded cables. However, it may be more susceptible to electromagnetic interference (EMI) and radio frequency interference (RFI) in environments with high levels of electromagnetic activity. This cable is commonly used for power distribution, control circuits, and general wiring in non-critical applications where shielding is not a primary concern.

In 2024, the global Unshielded Multi-core Cable market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
