### Report Overview

Uranium mining refers to the process of extracting uranium ore from the earth, which is primarily used as fuel for nuclear power plants and in the production of nuclear weapons. This process involves several stages, including exploration, extraction, milling, and refining. Exploration involves identifying potential uranium deposits through geological surveys and analysis. Extraction, or mining, is the actual process of removing uranium ore from the ground, which can be done through open-pit or underground mining methods. Milling involves crushing and chemically treating the ore to separate the uranium from other materials. Finally, refining processes the extracted uranium to produce a pure, usable form.
