Report Overview

The Urea Breath Test (UBT) Kit is a non-invasive diagnostic tool used to detect and monitor *Helicobacter pylori* (*H. pylori*) infection in the stomach. This infection is a common cause of gastritis, peptic ulcers, and gastric cancer. The UBT Kit works by utilizing the principle that *H. pylori* bacteria metabolize urea, a substance found in the stomach, and release carbon dioxide as a byproduct. The kit typically includes a urea solution containing a small amount of carbon-13 or carbon-14 isotope, which is ingested by the patient. As the bacteria metabolize the urea, the isotope-labeled carbon dioxide is released and can be detected in the patient's breath. By measuring the levels of the labeled carbon dioxide in the exhaled breath, healthcare professionals can accurately determine the presence and severity of *H. pylori* infection. The UBT Kit is valued for its simplicity, safety, and reliability, providing a convenient alternative to invasive diagnostic procedures.
