### Report Overview

A used telehandler is a versatile piece of heavy machinery commonly utilized in construction, agriculture, and industrial settings. It is a telescopic handler, which means it features a telescopic boom that can extend to lift and move heavy loads over considerable distances. The product name "used" indicates that the telehandler is not new but has been previously owned and operated, making it available at a potentially lower cost than a brand-new model. These machines are equipped with a cab for the operator and a range of attachments, such as buckets, pallet forks, or cranes, which can be interchanged depending on the task at hand. The primary function of a used telehandler is to provide efficient and safe material handling, enabling the operator to lift, stack, and transport heavy objects with precision and ease.
