### Report Overview

UVC Dosimeters are specialized devices designed to measure the intensity and exposure of ultraviolet C (UVC) radiation. UVC light, which falls within the wavelength range of 100-280 nanometers, is known for its germicidal properties and is commonly used for disinfection purposes. These dosimeters are crucial in ensuring the effectiveness and safety of UVC light sources in various applications, such as air and water purification, surface disinfection, and medical facilities. They function by converting the absorbed UVC energy into a measurable signal, which can then be used to assess the dosage of UVC radiation and verify that it meets the required standards for effective disinfection without causing harm to humans or the environment. UVC Dosimeters are essential tools in maintaining the balance between the benefits of UVC light and the potential risks associated with overexposure.
