### Report Overview

The V2X (Vehicle-to-Everything) onboard unit is an advanced telematics device installed in vehicles to enable real-time wireless communication between the vehicle and its surroundings, including other vehicles (V2V), infrastructure (V2I), pedestrians (V2P), and networks (V2N). This technology enhances road safety, traffic efficiency, and autonomous driving capabilities by facilitating the exchange of critical data such as speed, location, road conditions, and hazard alerts. V2X relies primarily on Dedicated Short-Range Communications (DSRC) or Cellular-V2X (C-V2X) standards, with C-V2X gaining traction due to its superior range, reliability, and compatibility with 5G networks. The market is driven by increasing regulatory support, the push for smart city initiatives, and the growing adoption of connected and autonomous vehicles (CAVs). However, challenges such as high deployment costs, interoperability issues, and cybersecurity concerns may hinder widespread adoption. Key players include automotive OEMs, telecom providers, and technology firms investing in V2X solutions to capitalize on the expanding ecosystem of intelligent transportation systems (ITS).
