Abstracts

A Vaccine Electronic Shipping Indicator (VESI) is a specialized device designed to monitor and record temperature conditions during the transportation of vaccines and other temperature-sensitive pharmaceuticals. VESIs are typically compact, battery-powered devices equipped with sensors that continuously measure and record temperature data throughout the shipping process. These devices are affixed to vaccine shipments and provide real-time monitoring of temperature conditions, alerting stakeholders to any temperature excursions that could compromise the efficacy and safety of the vaccines. VESIs are essential for ensuring compliance with regulatory requirements and quality standards for vaccine storage and transportation, helping to prevent temperature-related damage and spoilage. Additionally, VESIs may incorporate features such as data logging capabilities, alarm notifications, and tamper-evident mechanisms to enhance visibility, accountability, and security throughout the supply chain.
