Abstracts

Vacuum Wastewater Conveyance System is a system that uses the pressure difference between the vacuum generated in the pipeline and the atmosphere to mix wastewater and air for collection and transportation. It consists of three elements: 'vacuum valve unit', 'vacuum pipeline' and 'vacuum station' constitute. Sewage from household drainage flows in a gravity-flow manner and flows into the vacuum valve unit through the drainage equipment in the house. After a certain amount of sewage flows in, the vacuum valve will automatically start, and sewage and air will be sucked into the vacuum pipeline. The air sucked into the vacuum pipeline expands, and the sewage is converted into a gas-liquid mixed phase flow, which is collected and transported to the vacuum station.

The global Vacuum Wastewater Conveyance Systems market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
