Report Overview

Varicose vein stockings, also known as compression stockings or support hose, are a type of medical garment designed to provide graduated compression to the legs. These stockings are typically made from elastic materials such as nylon, spandex, or a blend of natural and synthetic fibers. They are engineered to exert a higher level of pressure at the ankle and gradually decrease pressure as they extend up the leg, which helps to improve blood circulation and reduce swelling. Varicose vein stockings are commonly used to alleviate symptoms associated with varicose veins, deep vein thrombosis, and lymphedema, as well as to prevent blood clots in individuals who are at risk due to prolonged periods of immobility or certain medical conditions. They are available in various lengths, compression levels, and styles to cater to different needs and preferences.
