### Report Overview

VCI (Vapor Corrosion Inhibitor) stretch wrap is a specialized packaging material designed to protect metal surfaces from corrosion during storage and transportation. Unlike conventional stretch wraps, it incorporates volatile corrosion inhibitors that release protective vapors to form a molecular layer on metal surfaces, preventing oxidation and rust in humid or harsh environments. The wrap is typically made from polyethylene and is used across industries like automotive, aerospace, manufacturing, and military logistics, where metal components are prone to degradation. Its dual functionality?providing physical protection while actively inhibiting corrosion?makes it a cost-effective alternative to traditional methods like oil coatings or desiccant bags, particularly for long-term storage or overseas shipments. The product is available in various thicknesses and widths to accommodate different industrial needs, and its effectiveness can last from months to several years depending on environmental conditions and formulation.
