Report Overview

Vegetable Tanning Extracts are natural, plant-derived substances used in the leather tanning process. These extracts are derived from the bark, leaves, fruits, or other parts of various plants, such as quebracho, mimosa, and oak. They play a crucial role in transforming raw animal hides into durable, supple, and long-lasting leather products. The tanning process involves the interaction between the vegetable tanning extracts and the proteins in the hide, which results in the formation of a stable, cross-linked network that prevents the leather from decaying and losing its shape. Vegetable tanned leather is known for its strength, water resistance, and ability to develop a rich patina over time. It is commonly used in the production of high-quality leather goods, such as shoes, belts, bags, and upholstery, due to its durability and aesthetic appeal.
