Report Overview

Very Low Sulphur Fuel Oil (VLSFO) is a type of marine fuel that has been specifically formulated to meet the stringent environmental regulations set by the International Maritime Organization (IMO). VLSFO is characterized by its low sulphur content, typically not exceeding 0.5% by mass, which significantly reduces the emission of harmful sulphur oxides (SOx) into the atmosphere. This fuel is a blend of various petroleum products, including distillates and residues, and is designed to be compatible with the existing marine engine systems. VLSFO plays a crucial role in the shipping industry's efforts to reduce air pollution and protect the environment, as it complies with the IMO 2020 regulation that mandates the use of fuel with a sulphur content of 0.5% or less in Emission Control Areas (ECAs) and globally from January 1, 2020. The implementation of VLSFO has been a significant step towards cleaner shipping and aligns with the broader goals of sustainable development and environmental conservation.
