Report Overview

Very Narrow Aisle (VNA) Racking is a specialized type of warehouse storage system designed to maximize space efficiency by utilizing the full height of a warehouse and minimizing the aisle space required for forklifts to access palletized goods. This racking system is characterized by its high-density storage capabilities, with pallets stored in deep lanes and accessed via narrow aisles that are typically only wide enough for a forklift to maneuver. VNA racking systems are often used in industries where space is at a premium, such as distribution centers, cold storage facilities, and manufacturing plants. They are engineered to accommodate high bay warehouses, allowing for the vertical stacking of pallets to optimize the use of vertical space. The system typically requires specialized forklifts, known as Very Narrow Aisle (VNA) trucks or order pickers, which are designed to operate in the tight spaces between the racking. The VNA racking system not only improves space utilization but also streamlines inventory management and can contribute to increased operational efficiency.
