### Report Overview

The Vest Airway Clearance System, also known as the Hill-Rom Vest, is a non-invasive, high-frequency chest wall oscillator (HFCWO) therapy device designed to assist in the clearance of excess mucus and secretions from the airways. It is primarily used for patients with chronic respiratory conditions such as cystic fibrosis, bronchiectasis, and chronic obstructive pulmonary disease (COPD). The system works by applying rapid oscillations to the chest wall, which helps to mobilize secretions and facilitate their removal through coughing or suctioning. This therapy can be used as an adjunct to standard airway clearance techniques, such as chest physiotherapy or postural drainage, and is often prescribed by healthcare professionals to improve lung function, reduce the frequency of pulmonary infections, and enhance the overall quality of life for patients with compromised respiratory function.
