Report Overview

Veterinary Endoscopy Capsules are specialized diagnostic tools designed for the non-invasive examination of the gastrointestinal tract in animals. These capsules are equipped with miniature cameras and lighting systems that allow veterinarians to visualize the internal lining of an animal's digestive system. They are typically swallowed by the animal and then pass through the digestive tract, capturing and transmitting real-time images to a monitoring device. This technology enables veterinarians to detect abnormalities, such as inflammation, ulcers, tumors, or foreign bodies, without the need for invasive procedures like traditional endoscopy. The capsules are made from biocompatible materials that are safe for ingestion and are designed to be excreted naturally once their diagnostic journey is complete. This method of examination is particularly valuable for???, where traditional endoscopy may be more challenging or risky.
