Report Overview

A Veterinary Tonometer is a specialized medical device designed for the measurement of intraocular pressure (IOP) in animals, particularly in veterinary practice. It is an essential tool for diagnosing and monitoring various eye conditions such as glaucoma, corneal edema, and other ocular diseases that can affect vision and overall eye health in pets. The tonometer works by applying a gentle force to the animal's cornea, which then calculates the pressure within the eye. There are different types of tonometers, such as rebound, indentation, and non-contact, each with its own advantages and limitations. The choice of tonometer may depend on factors like the animal's size, the condition being assessed, and the practitioner's preference. Accurate IOP measurement is crucial for effective treatment planning and management of ocular diseases in veterinary patients.
