Report Overview

Vinyltrisisopropoxysilane, also known as VTIPS, is a colorless liquid organosilane compound with the chemical formula $(C_3H_8O)_3Si-CH=CH_2$. It is widely used as a coupling agent in various industries, including adhesives, sealants, coatings, and composites. The product plays a crucial role in enhancing the adhesion between inorganic substrates, such as glass, minerals, and metals, and organic polymers. This is achieved by forming covalent bonds between the silanol groups on the inorganic surface and the hydrolyzed silane, which then reacts with the organic polymer matrix. The vinyl functionality in the molecule allows for copolymerization with other vinyl monomers, further improving the interfacial adhesion and overall performance of the final product.
