Abstracts

Virtual Machine Hosting Service is an IT infrastructure service operated by professional data center providers. Its core model involves the provider offering physical server rack space, stable power supply, sophisticated cooling systems, physical security, and high-speed network bandwidth within its own or leased high-specification data centers. Customers purchase or lease physical server hardware and place it in the provider's server room. The customer or an authorized administrator is responsible for all software-level operations of the servers, including installing operating systems, configuring applications, and maintaining data. Unlike the virtualization leasing model of cloud computing, the core of VMHS lies in the fact that "ownership and control of the physical equipment belong to the customer," while the provider offers "a professional location and guarantee for storing and operating this equipment." This model provides customers with exclusive, high-performance, and highly customizable control over hardware resources, while eliminating the enormous costs and operational complexities of self-built data centers in terms of capital investment, space, power, cooling, and network access. It is particularly suitable for enterprises requiring specific hardware configurations, prioritizing data physical security, or having strict compliance requirements. It is an important form of traditional IDC service and a fundamental component of hybrid cloud architectures that carries core physical equipment. The global Virtual Machine Hosting Service (VMS) market is highly regionalized. North America and Europe, as mature markets, possess well-developed infrastructure and stringent compliance systems (such as GDPR), with demand concentrated in financial transactions, enterprise-grade hybrid cloud deployments, and secure data hosting. The Asia-Pacific region is the core growth engine, driven by digital transformation, e-commerce, and the gaming industry, experiencing a surge in demand, particularly in China, Singapore, and India, where the market focuses on high-density computing and low-latency network connectivity. Emerging markets such as Latin America and the

Middle East are rapidly building data centers to address localized data sovereignty regulations and the rise of the internet economy. The overall trend is that services are evolving from basic rack leasing to deep integration with the public cloud, providing high-performance computing and industry-customized solutions to meet the complex needs of globalized enterprise hybrid IT architectures.

The global Virtual Machine Hosting Service market size was estimated at USD 723.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
