## Abstracts

Virtual makeup trial is a technology that uses augmented reality (AR) and artificial intelligence (AI) to allow users to preview the effects of cosmetics on their faces in real time through devices such as smartphones, tablets or smart mirrors. It allows users to try different makeup, colors and styles without actually applying cosmetics, thereby simplifying the shopping process and enhancing the shopping experience. Virtual makeup trial is not only widely used on the online platforms of beauty brands, but also used as an interactive marketing tool in physical stores to help consumers make purchasing decisions more confidently. The trend of virtual makeup trials is moving towards a more personalized and interactive direction. With the continuous advancement of artificial intelligence and augmented reality technology, users can get an increasingly realistic makeup trial experience. Future virtual makeup trial solutions will focus more on seamless integration into e-commerce platforms, provide advanced features such as real-time skin color matching and allergy reaction prediction, and support cross-platform use, thereby improving user shopping convenience and satisfaction. At the same time, brand owners will also use big data analysis to understand consumer preferences, launch customized product recommendations, and achieve precision marketing. In addition, as consumers pay more attention to contactless technology and sustainability, virtual makeup trials, as an environmentally friendly and hygienic option, will further expand its scope of application and become an indispensable part of the beauty industry.

The global Virtual Makeup Try-On market size was estimated at USD 1215.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
