Report Overview

VOC (Volatile Organic Compounds) recovery units are specialized systems designed to capture and reclaim volatile organic compounds emitted during industrial processes, preventing their release into the atmosphere while enabling their reuse in production or energy generation. These units are critical in industries such as petrochemicals, pharmaceuticals, coatings, and printing, where solvents and hydrocarbons are widely used. The market for VOC recovery units is driven by stringent environmental regulations, increasing corporate sustainability initiatives, and the economic benefits of solvent recovery, which reduces raw material costs.
