Abstracts

Volatile Corrosion Inhibitor (VCI) Liquids are specialized solutions designed to protect metal surfaces from corrosion. These liquids contain volatile corrosion inhibiting compounds that release corrosion-inhibiting vapors into the surrounding environment. When applied to metal surfaces or enclosed within a sealed space, VCI liquids create a protective layer on the metal, preventing the formation of corrosion by inhibiting the electrochemical reactions that lead to rust and oxidation. VCI liquids are commonly used in industries where metals are susceptible to corrosion during storage, transportation, or periods of inactivity. They are particularly effective for protecting metal components, machinery, and equipment in a wide range of applications, including manufacturing, shipping, and military storage. The volatile nature of these inhibitors allows them to reach and protect exposed metal surfaces, offering a convenient and efficient solution for corrosion prevention.

The global Volatile Corrosion Inhibitor Vci Liquids market size was estimated at USD 385.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.
