Report Overview

Voluntary Carbon Credits (VCCs) refer to a market-based mechanism that allows individuals, businesses, and organizations to voluntarily offset their greenhouse gas emissions by purchasing and retiring carbon credits. These credits represent a reduction or removal of one metric ton of carbon dioxide equivalent (CO₂e) from the atmosphere. VCCs are distinct from compliance-based carbon credits, which are mandated by government regulations for entities to meet specific emission reduction targets. Voluntary carbon credits are often sourced from projects that focus on renewable energy, energy efficiency, reforestation, and other activities aimed at reducing carbon emissions or enhancing carbon sequestration. By purchasing VCCs, entities can demonstrate their commitment to sustainability, contribute to global climate change mitigation efforts, and potentially improve their environmental, social, and governance (ESG) scores. The voluntary nature of VCCs means that participation is not legally required, but rather driven by the desire to take proactive steps towards reducing one's carbon footprint and supporting climate-friendly initiatives.
