Report Overview

Vulcanizing Agent PDM, also known as Polydimethylsiloxane, is a type of chemical compound widely used in the rubber and polymer industries. It is a silicone-based polymer that serves as a curing agent, facilitating the vulcanization process in rubber production. Vulcanization is the process of converting raw rubber into a more durable and elastic material by cross-linking its polymer chains. PDM is particularly effective in enhancing the physical properties of rubber, such as its resistance to heat, cold, and chemical degradation. It is also used in various applications, including the production of silicone rubber, sealants, adhesives, and coatings, due to its ability to provide flexibility, stability, and resistance to extreme temperatures. The use of Vulcanizing Agent PDM can significantly improve the performance and longevity of rubber products, making it a valuable component in the manufacturing process.
