Report Overview

A wall-climbing inspection robot is a robot that can move autonomously on vertical or inclined walls, pipes, bridges and other structural surfaces. It is mainly used to perform inspection, maintenance and monitoring tasks. Such robots are usually equipped with magnetic suction, vacuum adsorption or other wall-climbing technologies to ensure stable movement on complex surfaces. At the same time, they are usually equipped with cameras, sensors or other detection equipment to collect data on the target surface in real time and analyze the integrity and safety of the structure. Such robots are widely used in industrial facilities, building exteriors, wind power towers and other difficult-to-access scenes, helping to improve inspection efficiency and reduce the risks of manual high-altitude operations.
