### Report Overview

Walnut peel extract is derived from the outer green husk of walnuts (*Juglans regia*) and is valued for its high concentration of bioactive compounds, including polyphenols, flavonoids, and juglone, which exhibit antioxidant, anti-inflammatory, and antimicrobial properties. The extract is increasingly used in nutraceuticals, cosmetics, and pharmaceuticals due to its potential health benefits, such as improving skin health, supporting cardiovascular function, and acting as a natural preservative. Market demand is driven by a growing preference for plant-based and sustainable ingredients in personal care and dietary supplements, as well as increasing awareness of its traditional medicinal uses in regions like Asia and Europe. The nutraceutical sector dominates applications, with significant interest from the cosmetic industry for its skin-brightening and anti-aging effects. However, challenges include limited standardization in extraction methods and potential regulatory hurdles in certain markets. Key producers focus on organic and eco-friendly sourcing to cater to conscious consumers, while innovation in extraction technologies aims to enhance yield and potency.

Geographically, North America and Europe lead in consumption, but Asia-Pacific shows rapid growth due to rising disposable incomes and demand for natural health products.
