Octocrylene is a common ingredient in cosmetics and sunscreens. It serves as an organic UV filter that helps protect the skin from harmful UVB radiation from the sun. Octocrylene is known for its ability to absorb and dissipate UV rays, preventing them from penetrating the skin and causing damage like sunburn and premature aging. Octocrylene's inclusion in cosmetic products, especially sunscreens, enhances their effectiveness in providing broad-spectrum sun protection. However, it is worth noting that some concerns have been raised about potential skin sensitivity and the need for careful formulation due to its potential to degrade in the presence of other UV filters or sunlight. The chemical formula of Octocrylene is $C_{24}H_{27}NO_2$.
