Abstracts

Waste to Energy Stoker Fired Boilers refer to a type of boiler system used in waste-to-energy plants to convert municipal solid waste (MSW) into energy. These boilers employ a stoker, which is a mechanical system that moves the waste through the combustion chamber, ensuring efficient burning. The waste, once fed into the boiler, is subjected to high temperatures, producing heat. This heat is used to generate steam, which can then be utilized to produce electricity or supply heating. Stoker fired boilers are known for their ability to handle a wide range of waste materials, making them a versatile and efficient solution for waste management and energy production.

The global Waste To Energy Stoker Fired Boilers market size was estimated at USD 1325.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
