Report Overview

The water-cooled double screw chiller is a refrigeration system designed for large-scale commercial and industrial applications, utilizing two intermeshing screw rotors to compress refrigerant gas, which is then cooled by water in a condenser. This type of chiller is known for its high efficiency, reliability, and ability to handle heavy cooling loads, making it ideal for data centers, manufacturing plants, hospitals, and large office buildings. The water-cooled design offers superior heat dissipation compared to air-cooled systems, ensuring stable performance in high-ambient-temperature environments. Key components include the screw compressor, shell-and-tube heat exchanger, expansion valve, and control system, with modern variants incorporating variable-speed drives (VSDs) to optimize energy consumption. The market for these chillers is driven by increasing demand for energy-efficient HVAC solutions, stringent environmental regulations, and the growth of industries requiring precise temperature control.
