Report Overview

The water-cooled stripper is a specialized industrial equipment used primarily in chemical and petrochemical processing to separate volatile components from liquid mixtures through a combination of heat exchange and vapor-liquid equilibrium. It operates by circulating cooling water through an integrated heat exchanger while simultaneously stripping undesired components (such as light hydrocarbons or dissolved gases) from the process stream, often in distillation or absorption columns. This system enhances efficiency by maintaining optimal temperature control, preventing overheating, and improving separation performance. Water-cooled strippers are critical in refining, gas treatment, and wastewater processing, where precise temperature management ensures operational safety, energy efficiency, and compliance with environmental regulations. Their design often integrates corrosion-resistant materials to handle aggressive chemicals, making them suitable for high-pressure and high-temperature applications in sectors like oil & gas, pharmaceuticals, and specialty chemicals.
