Abstracts

Water immersion microscope objectives are microscope objectives that use water as a medium to fill the space between the front end of the objective and the sample. Unlike air objectives, the refractive index of water is closer to that of many biological samples, which reduces aberrations caused by light refraction, thereby improving imaging quality, especially in microscopic imaging of living cells and tissues.

The global Water Immersion Microscope Objective market size was estimated at USD 45.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
