## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water Soluble Fluxes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Water soluble flux refers to flux whose residue can be easily cleaned with water after soldering. It features strong soldering performance and easy cleaning, and is widely used in electronic product assembly and other fields. Fluxes containing inorganic acids mainly consist of hydrochloric acid and hydrofluoric acid, while fluxes containing inorganic salts mainly consist of zinc chloride and ammonium chloride. Downstream applications are in the electronics manufacturing industry, centered on PCB assembly, including consumer electronics, automotive electronics, communication and medical equipment, etc. Global sales volume in 2024 was approximately 7,500 tons, with an average market price of approximately US\$25 per kilogram. The industry's gross profit margin ranged from 25% to 50%. The most significant characteristic of water-soluble fluxes is their high solubility and activity in water, resulting in excellent soldering performance. Post-soldering residues are readily soluble in water, allowing water to be used directly as a cleaning solvent. This eliminates the consumption of ODS and VOCs, reducing environmental pollution and safety risks. The continued expansion of the electronics industry, particularly the surge in demand for printed circuit boards (PCBs), has driven the market demand for high-performance soldering materials. Water-soluble fluxes, due to their superior cleaning capabilities and minimal post-soldering residue, effectively ensure the reliability and long-term stability of precision electronic products such as semiconductor equipment.

The global Water Soluble Fluxes market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20%

during the forecast period.
