Abstracts

Water-soluble pickling corrosion inhibitor refers to a chemical substance added during the pickling process. Its purpose is to form a protective film on the metal surface to slow down or prevent the acid from corroding the metal substrate. Pickling is a commonly used method in the metal surface treatment process to remove impurities such as oxide scale, rust, dirt, etc. on the metal surface to improve the cleanliness of the metal surface and the quality of subsequent treatment. However, if there is a lack of proper protective measures during the pickling process, it may cause corrosion of the metal substrate.

The global Water Soluble Pickling Corrosion Inhibitor market size was estimated at USD 128.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
