Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wearable Neck and Shoulder Massagers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Wearable neck and shoulder massagers are portable physiotherapy devices worn around the neck and shoulders. They typically relieve muscle tension and soreness through simulated kneading, tapping, airbag compression, constant temperature heat therapy, and electrical stimulation. They are suitable for daily relaxation and health maintenance for office workers who sit for long periods, drivers, and middle-aged and elderly people. Upstream suppliers include plastic and hardware components, motors and reduction gears, lithium batteries, control chips, sensors, fabrics, and packaging materials. Downstream channels cover e-commerce platforms, offline home appliance and health equipment stores, cross-border e-commerce, and pharmaceutical chains. In 2024, the global market price for wearable neck and shoulder massagers was \$151 per unit, with sales of approximately 20.47 million units and global production capacity of 21-22 million units. The industry profit margin was 15-25%. Global Market Future Development Trends The global wearable neck and shoulder massager market will continue to be driven by the "sedentary population + home health management" trend. The widespread adoption of remote work and the expansion of the sub-healthy population are shifting neck and shoulder relaxation from occasional consumption to a high-frequency, essential need. Europe, the US, Japan, and China remain the main demand and supply centers, while emerging markets such as Latin America and Southeast Asia have room for increased penetration. Technologically, the market will evolve towards both intelligent and lightweight designs. More products will connect to mobile apps, offering fine-tuning of intensity, rhythm, and temperature, as well as preset programs. Sensors will collect data on posture and usage time to enable

simple data analysis and personalized solutions. In terms of structure and materials, upgrades will focus on greater ergonomics, thinner and quieter designs, and longer battery life to meet the needs of extended wear and mobile use. Regarding market models, online channels and social media promotion will remain the core drivers, with cross-border e-commerce accelerating the export of Chinese products. Brands will shift from competing on single blockbuster products to developing a "health ecosystem," combining products with neck pillows, cushions, and eye massagers for bundled sales. At the same time, countries are tightening safety and electromagnetic compatibility standards for home medical devices and massagers, and compliance certification, quality, and after-sales service will become key barriers to global brand competition.

The global Wearable Neck and Shoulder Massagers market size was estimated at USD 3091.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
