### Report Overview

Wet Marine Scrubber Systems are advanced pollution control technologies designed specifically for maritime applications. These systems are engineered to reduce harmful emissions, such as sulfur oxides (SO<sub>x</sub>), nitrogen oxides (NO<sub>x</sub>), and particulate matter (PM), from ships' exhaust gases. They operate by using a liquid scrubbing process to capture and neutralize pollutants before the exhaust is released into the atmosphere. The scrubbing liquid, typically seawater or a mixture of water and chemicals, is sprayed into the exhaust stream, where it reacts with the pollutants, forming a slurry that can be treated and disposed of according to environmental regulations. Wet Marine Scrubber Systems are crucial for compliance with the International Maritime Organization's (IMO) regulations, particularly the Sulfur Emission Control Areas (SECAs) and the global 0.5% sulfur cap, which aim to minimize the environmental impact of shipping on air quality and human health.
