Report Overview

Wet Mixing Rubber, also known as Masterbatch, is a type of rubber compound that has been pre-mixed with various additives and fillers to achieve specific properties and characteristics. This product is created by blending raw rubber materials, such as natural rubber or synthetic rubber, with additives like carbon black, sulfur, accelerators, and other compounds in a Banbury mixer or internal mixer. The resulting mixture is then extruded into a uniform, homogenous blend that can be easily incorporated into the final rubber product during the manufacturing process. Wet Mixing Rubber offers several advantages, including improved processing efficiency, reduced waste, and the ability to customize the rubber compound to meet specific performance requirements. It is widely used in various industries, such as automotive, construction, and consumer goods, for the production of tires, seals, hoses, and other rubber-based components.
