Report Overview

A wheel-based Automatic Guided Vehicle (AGV) is a type of mobile robot designed to transport materials or products within a facility autonomously, following predetermined paths. These AGVs operate on wheels and are equipped with advanced navigation systems such as laser-guidance, vision-based systems, or magnetic strips embedded in the floor to move accurately and efficiently within industrial environments like warehouses, manufacturing plants, and distribution centers. Wheel-based AGVs are integral to automated material handling systems, providing flexibility and reliability in tasks such as load transport, assembly line support, and inventory management. They are powered by rechargeable batteries and are equipped with sensors and safety mechanisms to avoid collisions and ensure safe operation around human workers and other machinery. The use of wheel-based AGVs enhances operational efficiency, reduces labor costs, and improves overall productivity by enabling seamless, continuous, and automated material flow within a facility.
