Report Overview

White Epoxy Molding Compound (EMC) is a type of thermosetting polymer composite material used in the electronics industry for encapsulating and protecting electronic components. It is primarily composed of epoxy resin, hardeners, fillers, and other additives, which are mixed and heated to form a solid, white-colored compound. This material offers excellent electrical insulation properties, high thermal conductivity, and mechanical strength, making it ideal for applications such as semiconductor packaging, printed circuit board fabrication, and electronic component encapsulation. The white color of the EMC provides a visual contrast, which can aid in the identification and inspection of electronic components during the manufacturing process.
