### Report Overview

A whole house fan, also known as an attic fan or power attic ventilator, is a large, high-capacity ventilation system designed to improve air circulation and reduce indoor temperatures within a residential property. This product typically consists of a powerful motor, a large-diameter fan, and a series of ducts or vents that distribute cooled air throughout the house. Whole house fans work by drawing in cool, outside air through open windows and forcing it through the home's interior, while simultaneously pushing hot air out through the attic or roof vents. This process helps to lower energy costs by reducing the reliance on air conditioning systems and promoting natural cooling. The product is often installed in the attic or ceiling space and can be controlled manually or through smart home automation systems for optimal convenience and efficiency.
