## Abstracts

A Wi-Fi 7 gateway is a network access device that integrates Wi-Fi 7 technology. As the core node of the network, it is responsible for converting wired network signals into wireless network signals and supports high-speed, low-latency data transmission of the Wi-Fi 7 standard. The Wi-Fi 7 gateway not only has higher transmission speeds and stronger anti-interference capabilities, but also supports more device connections and a wider range of application scenarios, such as virtual reality (VR), augmented reality (AR), smart home, and the Internet of Things.

**Drivers of Wi-Fi 7 Gateway Market**

**Demand for high-speed data transmission:** With the continuous development of Internet technology, people have higher and higher requirements for data transmission speed. As a new generation of wireless network access equipment, Wi-Fi 7 gateway can provide a transmission rate of up to 46 Gbps, which is four times faster than Wi-Fi 6, meeting users' demand for high-speed data transmission.

**Low latency performance:** Wi-Fi 7 gateway has lower latency performance, which is crucial for application scenarios that require real-time interaction such as online games and video calls. Low latency performance can ensure the timeliness and accuracy of data transmission and improve user experience.

**Multi-device connection capability:** With the popularization of technologies such as smart home and Internet of Things, more and more devices need to access the network. Wi-Fi 7 gateways support more device connections and can provide stable network connections and high-speed data transmission to meet users' needs for simultaneous connection of multiple devices.

**Application scenario expansion:** The application scenarios of Wi-Fi 7 gateways are constantly expanding, including virtual reality (VR), augmented reality (AR), remote office, online education, etc. These application scenarios have higher requirements for the speed, stability and reliability of wireless networks, which has promoted the development of the Wi-Fi 7 gateway market.

**Policy support and industrial development:** The attention and support of governments of various countries for network

infrastructure construction and the rapid development of the communications industry have provided a good policy environment and industrial foundation for the development of the Wi-Fi 7 gateway market. At the same time, with the continuous development of new technologies such as 5G and the Internet of Things, new opportunities have been brought to the development of the Wi-Fi 7 gateway market. Technological progress and cost reduction: With the continuous advancement of Wi-Fi technology and the continuous reduction of production costs, the performance of Wi-Fi 7 gateways has been continuously improved and the price has gradually decreased, allowing more users to afford and enjoy the high-speed and low-latency network experience brought by Wi-Fi 7. In summary, the Wi-Fi 7 gateway market is driven by multiple factors, including the demand for high-speed data transmission, low-latency performance, multi-device connection capabilities, application scenario expansion, policy support and industrial development, as well as technological progress and cost reduction. In the future, with the continuous advancement of technology and the continuous expansion of the market, the application scope of Wi-Fi 7 gateways will be further expanded, and the market prospects are broad.

The global Wi-Fi 7 Gateway market size was estimated at USD 437.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
