## Abstracts

Wind Blade Mold Temperature Controllers are specialized systems used to maintain precise temperature conditions during the manufacturing of wind turbine blades. These controllers regulate the mold's temperature by circulating a heat transfer fluid, typically water or oil, through a closed loop, ensuring consistent heating or cooling throughout the molding process. Proper temperature control is critical for ensuring the high-quality curing of composite materials like fiberglass or carbon fiber, which are commonly used in wind blades. By managing temperature variations, these controllers enhance production efficiency, improve blade durability, and reduce the likelihood of defects.

The global Wind Blade Mould Temperature Controllers market size was estimated at USD 380.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.25% during the forecast period.
