### Report Overview

A windproof jacket is a type of outerwear designed to protect the wearer from strong winds and cold temperatures. It is typically made from a combination of materials, such as polyester or nylon, that are lightweight, breathable, and water-resistant. The jacket's primary function is to shield the body from the wind's chill factor, which can significantly lower the perceived temperature and cause discomfort. Windproof jackets often feature a tightly woven fabric or a membrane that prevents wind from penetrating the garment, while still allowing moisture to escape, thus maintaining the wearer's comfort. They may also include additional features such as adjustable hoods, cuffs, and hems to further seal out the wind, and zippered pockets to secure belongings. These jackets are commonly used in outdoor activities where wind resistance is a concern, such as hiking, cycling, and running, as well as for everyday wear in windy conditions.
