Report Overview

Wire Mixed Metal Oxide (MMO) anodes are advanced corrosion-resistant electrodes used primarily in cathodic protection systems to prevent the degradation of metal structures immersed in conductive environments such as soil, seawater, or concrete. Composed of a titanium substrate coated with a mixed metal oxide (typically iridium or ruthenium-based), these anodes offer superior durability, high current efficiency, and long service life compared to traditional sacrificial anodes. They are widely employed in industries like oil and gas, marine, water treatment, and infrastructure, where protecting pipelines, storage tanks, offshore platforms, and reinforced concrete structures from electrochemical corrosion is critical. Their lightweight nature, low maintenance requirements, and adaptability to varying environmental conditions make them a preferred choice in modern corrosion mitigation strategies.
