Report Overview

Wired fire-resistant glass is a specialized type of safety glass designed to withstand high temperatures and prevent the spread of flames and smoke during a fire, while maintaining structural integrity for a specified period. It consists of a wire mesh embedded within the glass, which holds the material together even when exposed to extreme heat, reducing the risk of shattering and providing additional stability. This product is commonly used in fire-rated doors, windows, partitions, and other architectural applications where fire containment and safety are critical. The glass is rated based on its ability to resist fire for specific durations, such as 30, 60, or 90 minutes, meeting stringent building codes and safety standards. Its dual functionality?providing visibility while acting as a fire barrier?makes it a preferred choice in commercial, industrial, and institutional settings.
