Report Overview

The Wireless Caregiver Pager Set is a communication device designed to assist caregivers in monitoring and responding to the needs of individuals under their care, particularly in healthcare or elderly care settings. This set typically consists of a transmitter, which is placed near the person being cared for, and a receiver or pager that the caregiver carries with them. The transmitter sends a signal to the pager when activated, either by the person in need pressing a button or through a sensor detecting a specific event, such as a fall. The pager then alerts the caregiver with an audible or visual signal, allowing them to respond promptly.
