## Abstracts

Wireless charging is the transmission of energy from a power source to a device without wires or cables. A wireless charging technology is comprised of two parts, a transmitter (the actual charging station itself) and a receiver (which is inside the device you are charging). Wireless Charging ICs are the core part of Wireless Charging technology. The wireless charging chip market is experiencing rapid growth, primarily driven by the proliferation of smartphones, wearables, and electric vehicles. As technology advances, charging efficiency and compatibility continue to improve, with the widespread adoption of standards like Qi enhancing device interoperability. Additionally, reduced production costs and the introduction of new technologies, such as magnetic resonance and RF charging, offer fresh market opportunities. User emphasis on convenience and environmental concerns further fuels the adoption of wireless charging, while the rise of the electric vehicle market and supportive policies provide strong backing for industry development. In the future, wireless charging technology will be applied in more scenarios, and companies need to strengthen R&D and collaboration to remain competitive.
