Abstracts

Wireless ECG Monitors, also known as wireless electrocardiogram monitors or wireless EKG monitors, are medical devices used to measure and record the electrical activity of the heart without the need for traditional wired electrodes and cables. These devices utilize wireless technology, such as Bluetooth or Wi-Fi, to transmit real-time or stored electrocardiogram (ECG or EKG) data to a monitoring device or a healthcare provider's system. They are used for diagnosing and monitoring heart-related conditions and are often employed in hospitals, clinics, and home healthcare settings. The adoption of wireless ECG monitors has surged with the increasing emphasis on remote patient monitoring, especially in the context of chronic diseases and post-operative care. These devices enable patients and healthcare providers to monitor heart health remotely, reducing hospital readmissions and improving overall patient outcomes. There is a growing trend towards home-based healthcare, and wireless ECG monitors play a crucial role in enabling patients to monitor their heart health in the comfort of their homes. This is particularly beneficial for individuals with chronic heart conditions. The expansion of telemedicine and telehealth services has increased the demand for wireless ECG monitors, as they facilitate remote consultations with healthcare providers and enable real-time ECG data sharing.

The global Wireless ECG Monitors market size was estimated at USD 359.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
