Report Overview

The wireless GPS bike computer is a compact, handlebar-mounted device designed to track and display cycling performance metrics in real time, leveraging GPS technology to provide accurate data on speed, distance, elevation, route mapping, and navigation. These devices often integrate with ANT+ and Bluetooth sensors to capture additional metrics such as cadence, heart rate, and power output, syncing data to companion apps for post-ride analysis. Unlike traditional bike computers, wireless GPS models eliminate the need for external sensors for basic functions, offering greater convenience and broader functionality.
